2. INTRODUCTION

HDM-C6IPX-SET, HDMI extender set is an upgraded version of Avenview's popular HDM-C6IP-SET designed to provide an extra distance, extra IR support and the main difference it is network friendly - can be added to your existing network. Having a few years experience with HDMI over IP we have engineered a newer chipset providing extra PPI in resolution and lower bandwidth. So the user can extend any HD display with the resolutions of 1080p/60Hz up to 394 feet (120 meters) away from your HDMI or DVI-D source. Thanks to the use of the TCP/IP protocol, you can transfer your high-definition video over any existing TCP/IP network. See below three examples:

- A:** The Tx and Rx units can extend 120 meters over a single CAT5/6 cable connection point to point.
- B:** The Tx can be connected to a Gigabit switch to establish a IP address therefore sending 1080p video signals to multiple Rx connected to the Gigabit switch and the HDMI displays.
- C:** Multiple Tx's can be connected to a Managed Gigabit switch with VLAN/IGMP support therefore sending 1080p video signals to Rx connected to the Gigabit switch to show different sources on the HDMI displays.
 - Extends HDMI up to 120m over single CAT5E/6
 - Supports HDMI, EDID, Support HDCP
 - Supports resolution HDTV / 1080Pp/60Hz, Vesa (1920 x 1080)
 - Supporting the point to point transmission function currently which can be expanded to the multi-point to point transmission function.
 - Requires a managed Gigabit switch with VLAN/IGMP support to have a solution with multiple sources (Transmitters). Standard Gigabit switch can only support one transmitter.
 - The managed switch must support port based IEEE 802.1Q VLAN, IGMP, and to allow duplicate IP addresses across the VLAN domains.
 - Each VLAN acts as independent HDMI over IP Channel on the network.
 - Number of Tx and Rx that can be used is dependent on bandwidth of the switch (Recommended Gigabit switch 10/1000).
 - Unmanaged switches can be cascaded up to 3 layer network, allowing the farthest display to be located up to 394 meters away from the source device. Each receiver can be located up to 120 meters away from each switch.
 - Uses H.264 technology to process image compression on a fixed bandwidth.
