

CrystalView EX DVI dual port
multi-head model in mini chassis

- ▶ Extends up to four uncompressed DVI video and USB 2.0 signals up to 330ft (100m) over CATx cables
- ▶ Resolution up to 1920x1200@60Hz
- ▶ Provides high speed USB 2.0 ports with up to 40 Mbps throughput each
- ▶ Supports audio via USB or optional dedicated channel
- ▶ Transparent USB provides true plug and play extension of USB 2.0 and 1.1 devices

Features and Benefits

- Available as multi-unit (each video has USB extension), multi-head (only one video has USB extension), or video-only (no USB)
- Uncompressed video extension provides uncompromised quality at resolutions of 1920x1200@60Hz, 1920x1080@60Hz, and others
- Supports USB 2.0 at speeds to 40 Mbps and USB 1.1 and 1.0 at speeds from 1.5 to 12 Mbps
- Compatible with USB host ports: xHCI (USB 3.0), EHCI (USB 2.0), and OHCI/UHCI (USB 1.1)
- Compatible with Windows, OS-X, and Linux
- Transparent USB provides plug-and-play installation with no configuration required
- Remote USB ports provide 500mA each
- Two chassis styles: mini and wide
- Options include: bi-directional analog audio and RS-232
- USB 2.0 audio devices are supported
- Optional locking DC power supplies
- Optional rackmount kit

Product Overview

The CrystalView EX DVI Multi models are high performance KVM extenders. The product transports multiple uncompressed DVI video and USB 2.0 signals up to 330ft (100m) over CATx cables. They are used in a variety of commercial, industrial, military, residential, medical, data center, retail, hospitality, presentation, and other environments.

The extenders enable the computers to be placed in tamper-proof secure locations with optimized power and cooling. This also brings displays and devices to convenient locations near the users. Place them in your environment to extend computers for CAD operation, kiosks, conference room and auditorium uses, medical equipment, touchscreen digital signage, and many other applications.

Multi-unit models are used to aggregate several DVI+USB extensions into one chassis. Multi-head models extend multiple video outputs and one USB only. They are intended for use with computers operated by only one user. The video-only models omit any USB functions and extend the video only.

The product is also available as a single-port unit in either the mini chassis or a compact chassis (see separate datasheet). The single-port and multi-port units can be paired together, using the multi units where the equipment is clustered and using the single units where the equipment is spread out.

Typical Application

The CrystalView EX DVI Multi extenders consist of a Transmitter unit and a remote Receiver unit connected by up to 330 feet (100 m) of CATx cable. Use one CATx cable per video port.

Installation Installing the CrystalView EX DVI Multi extenders is very straightforward. For each set of video and USB (where present):

1. Transmitter video connects to computers with DVI male-to-male cables.
2. Each Transmitter USB connects to computers with one standard USB A-B cable. USB ports can be either USB 3.0, 2.0, or 1.1 computer host ports.
3. Receiver video connects to displays with DVI male-to-male cables.
4. Receiver USB devices plug in directly to the USB type A receptacles of the Receiver. Powered USB hubs can also connect to these ports to increase USB devices beyond three.
5. Connect CATx cables between the Transmitter and Receiver RJ45 link ports.
6. Connect the supplied power adapters to the transmitter and receiver units.
